

If you are using a macOS, iOS, or Windows device:

- 1 - Connect to MAGS-BYOD-5Ghz when at school.
- 2 – In the Username box, enter your MAGS username. There is no need to type your whole email address, just the username part is okay.
- 3 – In the Password box, enter your MAGS password.
- 4 – Click okay to start the connection.
- 5 – If prompted to accept a certificate, accept (and save if possible) the certificate.

The certificate helps build a stronger trust connection between your device and the school systems, and aids when you roam from one location to another.

The certificate only prompts, or shows, on more modern devices.

If you are using an Android, or ChromeBook device there are a few different steps:

- 1 - Connect to MAGS-BYOD-5Ghz when at school.
- 2 – Under EAP method, choose PEAP
- 3 – Under Identity, enter your MAGS username. There is no need to type your whole email address, just the username part is okay.
- 4 – Under Password, enter your MAGS password.
- 5 – Ensure Server CA Certificate is set to Do not check.
- 6 – Press Connect.

Screenshots of connecting a Chromebook to the WIFI are as below, though your Chromebook might look slightly different.
